3 January 1964

25X1A MEMORANDUM FOR THE RECORD

SUBJECT : Telecon [REDACTED] 1130,  
24 December 1963

25X1A 1. [REDACTED] has available (on hand at Rochester) all  
equipment and required crew for supporting the projected  
25X1A processing of 112A material at [REDACTED]. Approximately  
8 days would be required to get into operation, moving  
equipment through [REDACTED]

25X1A

25X1A 2. [REDACTED] was advised that the processing at [REDACTED]  
25X1A is still being considered, but is not being pursued on  
a crash basis. Probably, he should be advised of  
decision, when made, so that material presently assembled  
can be released.

25X1A 3. [REDACTED] indicated that additional dollies would be  
needed at [REDACTED] in order to respool from the take-up  
cassette onto SC-13 spools (20" flight film supply spools).  
EK feels that current plans to respool onto S-65 spools  
(holding 1000 feet standard base, about 2000 feet thin  
base) is adequate; there will be some loss from necessary  
cuts and splices. It may be desirable, for long-term  
112A and 112B operations to reconsider the usage of  
SC-13 spools.
